

Continuous Security & Compliance for the Cloud

The widespread growth in cloud adoption in recent years has given businesses across all industries the ability to transform and scale in ways never before possible. But the speed of those changes, combined with the drastically increased volume and complexity of resources in cloud environments, often forces organizations to choose between slowing the pace of their innovation or taking on massive unmanaged risk.

InsightCloudSec is a fully-integrated cloud-native security platform (CNSP) that enables organizations to drive cloud security forward through continuous security and compliance.

InsightCloudSec helps teams protect even the most complex multi-cloud and container environments from misconfigurations, policy violations, threats, and identity and access management (IAM) challenges. The solution features automated, real-time remediation in order to help customers more quickly respond to security or compliance risks.

Posture Management

By providing unified visibility and comprehensive asset inventory across all major cloud service providers, InsightCloudSec helps customers understand, audit, and monitor their security posture across all cloud resources. It also standardizes the terminology used across cloud vendors and helps to unify and future-proof policies across cloud environments, leading to reduced complexity and increased efficiency.

Automated Workflows

InsightCloudSec allows security teams to automate the preventive and reactive controls necessary to respond to or remediate issues at scale. Our nuanced approach to automation goes beyond shutting down risky instances, allowing teams to perform event-driven harvesting of additional data, send out notifications, create tickets, or schedule resource downtime during off hours to reduce cloud costs, all without human intervention.

Risk Assessment & Compliance Auditing

Measure your entire cloud footprint against your choice of more than 20+ regulatory and industry standards, or customize to align with your own corporate policy, to get a visual representation of compliance against required benchmarks for effortless executive reporting.

IAM Governance

Govern cloud identity & access management to rapidly uncover risky user or role policies, such as any principals who have wildcard blast radius, to make it easier to adapt a least-privilege access model across multi-cloud environments.

Infrastructure as Code Analysis

InsightCloudSec evaluates risk of infrastructure-as-code templates against an industry-leading number of security checks to provide a consistent definition of done and prevent misconfigurations or policy violations early in the software development lifecycle.

Kubernetes Security Guardrails

Empower DevOps teams with code-to-production security for Kubernetes deployments and workloads. With these frictionless guardrails in place, organizations maintain the smooth operation of business applications while continuously monitoring for potential threats and vulnerabilities at the cluster level.

Unparalleled Customer Satisfaction

The benefits of InsightCloudSec extend far beyond the technology itself. Our white-glove approach to product support and customer success has led to industry-leading customer satisfaction and will ensure that your team gets the maximum value out of your investment in InsightCloudSec.

Supported Platforms:

Amazon

Microsoft

Google

Kubernetes

Alibaba

Key Integrations

- Slack
- Jira
- ServiceNow
- InsightIDR
- PagerDuty
- Splunk
- Microsoft Teams
- Tenable
- InsightVM

Ask Us About

- Unified Terminology
- Event-Driven Harvesting
- Compliance Scorecards
- Owner-Tagging Bots
- Automated Response
- IaC Analysis

InsightCloudSec gives us the ability to automate governance, offer flexibility, allow better insights and controls, and enhance compliance -- all at the same time.
